

Meridian Analytics Platform v1 — Product Specification

Meridian Global Corp — Confidential Internal Document

****Meridian Analytics Platform v1 — Product Specification****

****=== 1.0 Executive Summary ===****

The Meridian Analytics Platform (MAP) v1 represents a significant advancement in enterprise data intelligence for Meridian Global Corp. Developed to address the growing complexity of fragmented data sources and multinational linguistic requirements, MAP v1 is a robust, cross-lingual data query and analysis platform. Its primary objective is to empower teams across all departments with actionable insights by unifying diverse data landscapes, thereby accelerating decision-making and fostering global collaboration. This initial release focuses on core querying capabilities, critical integrations, and foundational security, delivered through a scalable cloud-native architecture.

****=== 2.0 Core Product Capabilities ===****

MAP v1 is designed to break down traditional data and language barriers, offering a seamless experience for data exploration and analysis.

* **Cross-Lingual Enterprise Data Query:** The platform supports sophisticated data querying and content analysis across multiple languages. For v1, this includes comprehensive support for English, Hindi, and Mandarin Chinese. Users can construct queries in any of the supported languages, and MAP v1 intelligently processes and retrieves relevant data from disparate sources, presenting results in a unified format, irrespective of the original data's language of input. This capability is crucial for Meridian Global Corp's globally distributed operational teams.

* **Intuitive User Interface:** A user-friendly web interface provides a centralized portal for data exploration, query building, and dashboard creation, enabling both technical and business users to leverage the platform's power efficiently.

* **Intelligent Data Correlation:** MAP v1 incorporates advanced algorithms to correlate data across connected systems, facilitating a holistic view of enterprise information that might otherwise remain siloed.

****=== 3.0 Technical Specifications ===****

MAP v1 is engineered for performance, reliability, and stringent security standards, ensuring optimal operation for critical business analytics.

* **API Throughput:** The platform's external API is designed to sustain a throughput of 10,000 requests per minute. This capacity supports high-volume data integration and rapid programmatic querying from connected applications and internal services.

* **Uptime Service Level Agreement (SLA):** Meridian Global Corp commits to a 99.9% uptime SLA for the Meridian Analytics Platform v1. This excludes scheduled maintenance windows, which will be communicated to subscribed users with a minimum of 72 hours' advance notice, ensuring maximum availability for mission-critical analytics.

* **Data Encryption:** All data at rest and in transit within MAP v1, including user queries, metadata, and retrieved results, is protected using industry-standard 256-bit AES encryption. This robust encryption protocol safeguards sensitive enterprise information against unauthorized access and ensures compliance with global data protection regulations.

=== 4.0 Supported Integrations ===

MAP v1 provides out-of-the-box integration with widely adopted enterprise applications and cloud storage solutions, facilitating a comprehensive and centralized view of organizational data. Initial supported integrations include:

* **Customer Relationship Management (CRM):** Salesforce

* **Enterprise Resource Planning (ERP):** SAP (including S/4HANA and ECC), Oracle (ERP Cloud and Database services)

* **Cloud Storage Solutions:** Amazon Web Services (AWS) S3, Microsoft Azure Blob Storage

These native connectors enable direct data ingestion and real-time query execution across diverse systems, consolidating analytical capabilities within the Meridian Analytics Platform.

=== 5.0 Deployment Model ===

For its inaugural release, Meridian Analytics Platform v1 is exclusively available as a fully managed, cloud-hosted Software-as-a-Service (SaaS) solution. This cloud-only deployment model removes the burden of infrastructure management and maintenance from the user, offering unparalleled scalability, flexibility, and rapid deployment across all operational regions. Future versions of MAP may explore hybrid or on-premise deployment options, contingent upon evolving market demand and specific enterprise requirements.

=== 6.0 Security and Compliance ===

Meridian Global Corp maintains an unwavering commitment to the highest standards of data security and regulatory compliance for MAP v1. The platform, along with its underlying infrastructure and operational processes, adheres to rigorous industry benchmarks and holds the following certifications:

* **ISO 27001:** Certified for its comprehensive Information Security Management System (ISMS), ensuring systematic management of sensitive company and customer information.

* **SOC 2 Type II:** Provides assurance regarding the security, availability, processing integrity, confidentiality, and privacy of the system over an extended period.

These certifications underscore Meridian's dedication to protecting enterprise data and ensuring robust operational controls within the MAP v1 environment.

7.0 Pricing Structure

Meridian Analytics Platform v1 offers a flexible tiered subscription model designed to accommodate organizations of varying sizes and analytical needs. All pricing is billed monthly, with annual subscription options providing discounted rates.

Starter Plan:

* **Price:** \$299/month

* **User Limit:** Up to 5 named users

* **Ideal For:** Small teams or departments initiating their cross-lingual data analytics journey. Includes standard support and core platform features.

Professional Plan:

* **Price:** \$999/month

* **User Limit:** Up to 25 named users

* **Ideal For:** Growing teams and medium-sized organizations requiring more extensive data access, advanced analytical capabilities, and priority support.

Enterprise Plan:

* **Price:** Custom quotation

* **User Limit:** Unlimited named users

* **Ideal For:** Large multinational corporations like Meridian Global Corp, with complex data landscapes, requiring tailored integrations, dedicated account management, enhanced security features, and a bespoke service level agreement. Enterprise clients will receive a customized proposal following a detailed needs assessment.
