Meridian Analytics Platform v2 — Product Specification

Document ID: MAP-PS-V2-001

Version: 2.0.0

Date: October 26, 2023

Prepared by: Meridian Product Management, Analytics Division

Executive Summary

Meridian Global Corp is pleased to announce the official product specification for the Meridian Analytics Platform v2 (MAP v2). This significant release represents a foundational evolution in our data analytics capabilities, designed to empower Meridian teams and external clients with unparalleled real-time insights, enhanced operational agility, and streamlined data interaction. MAP v2 addresses critical demands for speed, scalability, and intelligent data exploration, reinforcing Meridian's commitment to delivering cutting-edge technology solutions across our global operations.

Key Enhancements and Features

Real-Time Streaming Analytics:

MAP v2 introduces a state-of-the-art real-time streaming analytics engine capable of processing and analyzing high-velocity data streams with sub-100ms latency. This capability enables immediate operational intelligence, proactive anomaly detection, and instantaneous response mechanisms across diverse use cases, from fraud prevention to IoT sensor monitoring. This enhancement is crucial for applications requiring immediate data actionability, moving beyond traditional batch processing limitations.

Multi-Region Deployment and Data Residency:

To support Meridian Global Corp's vast international footprint and ensure compliance with diverse regulatory frameworks, MAP v2 offers robust multi-region deployment capabilities across strategically located data centers in the US, EU, and APAC. This architecture ensures optimal performance through geographical proximity, enhances data sovereignty for sensitive workloads, and provides robust disaster recovery options, bolstering our commitment to data security and regulatory compliance worldwide.

AI-Powered Query Suggestions:

Leveraging advanced machine learning models, MAP v2 integrates AI-powered query suggestions directly within the platform's intuitive user interface. This feature intelligently assists users in constructing complex queries, discovering relevant data points, and uncovering hidden correlations within vast datasets. It significantly reduces the learning curve for new users and accelerates data exploration for experienced analysts, with the AI continuously learning from user behavior and evolving data schemas to refine its recommendations.

****Customizable Drag-and-Drop Dashboards:****

Empowering users with ultimate flexibility, MAP v2 introduces a completely redesigned dashboard interface featuring intuitive drag-and-drop functionality. Users can now effortlessly build highly personalized dashboards, choosing from a rich library of visualization widgets, custom metrics, and integrated data sources. This allows for tailored data presentation that aligns precisely with individual team objectives and reporting requirements, fostering a more direct and impactful interaction with analytics.

API and Integration Capabilities

****New REST and GraphQL APIs:****

MAP v2 expands its integration capabilities with the introduction of comprehensive new REST and GraphQL APIs. The REST API provides a robust, stateless interface for programmatic access to all core platform functionalities, including data ingestion, query execution, and dashboard management. The GraphQL API offers developers a highly flexible and efficient way to query exactly the data they need, reducing over-fetching and simplifying complex data aggregations. These APIs are designed to support a wider array of third-party integrations, custom application development, and seamless workflow automation across Meridian's ecosystem.

Migration Path and Deprecation

****Automated Migration from v1:****

Meridian Global Corp is committed to ensuring a smooth transition for existing MAP v1 users. An automated migration tool will be made available via the Meridian Developer Portal starting November 15, 2023. This tool is designed to facilitate the seamless transfer of existing dashboards, data sources, and user configurations to MAP v2 with minimal manual intervention. Comprehensive documentation and dedicated support resources will be provided to guide users through the migration process.

****Deprecation of /v1/legacy Endpoint:****

Please be advised that the `/v1/legacy` endpoint, previously provided for backward compatibility with certain MAP v1 components, is now officially deprecated. This endpoint will be fully sunset on October 31, 2026. All integrations and applications currently relying on `/v1/legacy` must be updated to utilize the new MAP v2 APIs prior to this sunset date. A detailed migration guide outlining alternative endpoints and recommended best practices is available on the Meridian Developer Portal. Failure to migrate will result in service disruption for affected components after the sunset date.

Pricing and Availability

Meridian Analytics Platform v2 is generally available as of November 1, 2023, with the following subscription tiers designed to meet a range of organizational needs:

* **v2 Starter:** Priced at \$399/month. Ideal for small teams and departmental use, offering core analytics features, limited data storage, and standard support.

* **v2 Professional:** Priced at \$1,299/month. Designed for growing organizations requiring enhanced capabilities, increased data volume, advanced integrations, and prioritized support.

* **v2 Enterprise:** Custom pricing available upon consultation. This tier provides comprehensive features for large-scale multinational operations, including unlimited data, advanced security options, dedicated technical account management, and enterprise-grade Service Level Agreements (SLAs).

For detailed feature comparisons across tiers or to arrange a consultation for the Enterprise tier, please contact your Meridian Global Corp account representative or visit the Meridian Analytics Platform section on the Meridian intranet portal.
